

# Perpendicular Lines

two lines that intersect to form a right angle

Line  $m$  is perpendicular to line  $n$ .  
 $m \perp n$

# Parallel Lines

lines that do not intersect and are coplanar

$m \parallel n$   
Line  $m$  is parallel to line  $n$ .

Parallel lines have the same slope.

# Skew Lines

lines that do not intersect and are not coplanar

# Transversal

a line that intersects at least two other lines

Line  $t$  is a transversal.

# Corresponding Angles

angles in matching positions when a transversal crosses at least two lines

Examples:

- 1)  $\angle 2$  and  $\angle 6$
- 2)  $\angle 3$  and  $\angle 7$

# Alternate Interior Angles

angles inside the lines and on opposite sides of the transversal

Examples:

- 1)  $\angle 1$  and  $\angle 7$
- 2)  $\angle 2$  and  $\angle 8$

# Alternate Exterior Angles

angles outside the two lines and on opposite sides of the transversal

Examples:

- 1)  $\angle 1$  and  $\angle 7$
- 2)  $\angle 2$  and  $\angle 8$

# Consecutive Interior Angles

angles between the two lines and on the same side of the transversal

Examples:

- 1)  $\angle 3$  and  $\angle 5$
- 2)  $\angle 4$  and  $\angle 6$

# Parallel Lines

Line  $a$  is parallel to line  $b$  when

Corresponding angles are congruent	$\angle 1 \cong \angle 5, \angle 2 \cong \angle 6,$ $\angle 3 \cong \angle 7, \angle 4 \cong \angle 8$
Alternate interior angles are congruent	$\angle 3 \cong \angle 6$ $\angle 4 \cong \angle 5$
Alternate exterior angles are congruent	$\angle 1 \cong \angle 8$ $\angle 2 \cong \angle 7$
Consecutive interior angles are supplementary	$m\angle 3 + m\angle 5 = 180^\circ$ $m\angle 4 + m\angle 6 = 180^\circ$
